PENSIONS PANEL – 7 MARCH 2017

Report of the Director of Finance and Resources

Annual Investment Strategy for Pension Fund Cash 2017/18

Recommendation of the Chairman

1. That the Pensions Panel approves the proposed Annual Investment Strategy (AIS) for the Staffordshire Pension Fund ('the Pension Fund'), for the investment of internally managed Pension Fund cash.

Reasons for Recommendations

2. In previous years, administering authorities were required to formulate a policy for the investment of its fund money by the Local Government Pension Scheme (Management and Investment of Funds) Regulations 2009; as a result the Pension Fund produced a separate AIS for its cash balances. The regulations, updated in 2016, now infer policies for fund money should form part of the Investment Strategy Statement (ISS), although this is not made explicit.
3. The Pension Fund considers it good practice to continue preparing a separate AIS for cash balances and make reference to it within the ISS. In addition, the Government has provided specific guidance to local authorities under the Local Government Act 2003 in completing an AIS; the relevant principles of which have been used to structure this AIS for the Pension Fund.

Background

4. The Pension Fund has a small strategic asset allocation to cash of 1%, recognising that cash balances are needed for the day to day management of the Pension Fund. This cash is managed by Officers in the County Council's Treasury and Pension Fund Team; mainly in the short-term to provide liquidity to pay bills as they arise. It is not invested solely to seek a return and is not usually considered a major asset allocation decision.
5. The cash does increase from time to time, pending investment in other major asset classes e.g. property and private debt. The proposed AIS will therefore need to allow for such situations occurring. The Pensions Panel will need to agree these temporary increases as part of its quarterly review of the strategic asset allocation benchmark, together with any associated ranges.

6. The proposed AIS will not deal with the segregated, relatively small working cash balances held by the custodian (Northern Trust) under the control of the investment managers or with cash arising from occasional transitional activity. Overnight, Northern Trust sweep funds into their “AAA” rated Money Market Funds (MMFs).

AIS for Pension Fund Cash 2017/18

Objectives of investment

7. The proposed main objectives for the AIS are to:
 - provide security of capital (i.e. ensure the return of the money and interest);
 - provide liquidity (i.e. pay the bills as they fall due and ensure funds are available for reinvestment when needed); and
 - earn interest (i.e. obtain a reasonable return within the constraints outlined at a) and b)).
8. The 1% allocation to cash will by its nature need to be kept short-term. To accommodate balances exceeding this allocation, investment limits for existing individual investment categories may need to be increased temporarily. If balances are higher, pending investment in other asset classes, temporary investments may need to be considered that recognise their longer-term nature. It is anticipated that initially, any longer term requirements will be fulfilled through the use of ‘cash plus or short bond funds’ (see **paragraph 24**).
9. To allow the practical management of the treasury transactions each day, it is proposed that the change in investment limits and the choice over the investments made is delegated to the Director of Finance and Resources. Outside of this, the Pensions Panel will need to assess any specific requirements and consider any changes that may be required to the AIS.
10. Cash balances had been relatively high in 2016/17 due to time lags between capital being committed and drawn e.g. to private debt funds. As a result of this increase in cash, investment limits for individual MMF’s were increased temporarily to a high of £42m during the year. In addition a second cash plus MMF was opened, the Royal London Cash Plus Fund. As some of the cash balances were subsequently reinvested as part of strategic asset allocation, the investment limits were again reduced to the current temporary level of £32m per individual MMF.
11. In 2017/18 the Pension Fund is expected to receive up to £90m in forward pension contributions from participating employers. This amount will form part of the Pension Fund cash balance until it can be invested in accordance with the main strategic allocation of assets. It is envisaged that the temporary investment limits for MMF’s may need to increase once again, or the scope to open a third investment fund be explored whilst the Pension Fund has higher cash balances.

Credit Rating Criteria and the Approved Lending List (the List)

12. Government regulations state that local authorities have to decide how they define a 'high credit rated' counterparty (i.e. a bank or a building society). In the past, the Fund has relied on advice and creditworthiness services from Treasury Management Advisors, such as those appointed by the County Council.
13. Recent changes in legislation have made investing with banks and building societies more risky for local authorities; the Pension Fund falls within this classification. In January 2015, the UK implemented the Bank Recovery and Resolution Directive (BRRD) which ensures EU Member States are consistent in how they deal with the failure of banks and investment firms; instead of a government "bail out" of a bank, a "bail in" of current investors will be forced upon the bank by regulators. The risk of loss for local authorities in a bail-in situation is much greater, as any unsecured fixed-term deposits would be ranked near the bottom of the capital structure and would be one of the first to suffer losses.
14. Under normal circumstances where the Pension Fund is fully invested, there is forecast to be a low level of cash, and it is considered unlikely that the Pension Fund will need to enter into a large number of term deposits with banks or building societies, thus reducing the risk of "bail in". This means a simplified AIS consisting of the three following elements, and acknowledging the 'high credit rating' concept, can still be proposed for 2017/18.
 - (i) Regulation Investments
15. Government Regulations specify the type of financial instruments that can be used and they divide them into 'specified' and 'non-specified' investments.
16. Specified investments are investments made in sterling for a period of less than a year that are invested with:
 - the UK Government;
 - a local authority;
 - a parish or community council (unlikely to be used by the Pension Fund);
or
 - a body, or in an investment instrument, that has a 'high credit rating'.
17. The first three named investments can be used by the Pension Fund by virtue of their inclusion within the guidance; these are referred to as Regulation Investments in the remainder of this report. It is important to note that these classes of investment are not subject to "bail-in" risk as mentioned earlier in this report (**see paragraph 13**).
- (ii) Money Market Funds (MMF's)
18. MMF's are pooled investment vehicles consisting of money market deposits and similar instruments. MMF's have been used for some time by the Pension

Fund and by Northern Trust as stated earlier. They are also widely used by other public and private sector bodies.

19. MMF's proposed for use by the Pension Fund would be 'AAA' rated, the highest possible credit rating and they would have the following attributes:
 - Diversified – MMF's are diversified across many different investments, far more than the Pension Fund could hope to achieve on its own account.
 - Same day liquidity – this means that funds can be accessed on a daily basis.
 - Ring-fenced assets – the investments are owned by the investors and not the fund management company.
 - Custodian – the investments are also managed by an independent custodian, who operates at arms-length from the fund management company.
 20. All treasury activity carries an element of risk and MMF's are no different. In the event of a further financial crisis, the failure of one or more of an MMF's investments could lead to a run on the MMF as investors rush to redeem their investment. This could then spread to other MMF's as investors take flight from this asset class.
 21. In December 2016, the European Commission and European Parliament agreed on proposals for regulatory reform to enhance the safety and stability of MMF's, and limit some of their risks. The European Council are yet to agree to the proposals, although implementation of the new legislation is expected by April 2018.
 22. The very low interest rate environment may threaten the ongoing continuity of MMF's. Each MMF charges a fee and this could mean that interest earned becomes negative after its deduction. If this problem arose then it would be a matter of moving funds to an alternative class of investment.
 23. MMF's as described in these paragraphs are judged to meet the criteria of an instrument that meets the definition of a 'high credit rating'. Providing daily liquidity, the Pension Fund currently has accounts open with 5 MMF's.
 24. Additionally, the Pension Fund invests in 2 'cash plus' MMF's. 'Cash plus and short bond' funds provide a useful longer term option to investments in same day notice MMF's. Whilst they are considered to be slightly higher risk, they can enhance investment returns and provide diversification away from very short term investments. An investment period of at least six months is generally recommended. It is proposed to delegate the decision on the further use of 'cash plus and short bond' funds to the Director of Finance and Resources, after taking appropriate advice.
- (iii) The Pension Fund's Banker
25. Relatively low levels of cash will be retained with Lloyds Bank each night earning interest at a market rate. It is important to note that funds are available daily and are not committed for any period of time.

Investment Diversification

26. In order to ensure diversification, it is proposed that under normal circumstances, the maximum investment limit for AAA rated diversified MMF's which are, by default, already invested across a larger number of counterparties, is the lower of 50% of total cash or £30m, per MMF. Cash plus and short bond funds will also be subject to these limits. This approach is considered reasonable for the Pension Fund's risk profile; taking into account that cash is only one asset class and the Pension Fund already has diversification across other asset classes. However, as stated in **paragraph 8**, a temporary rise in cash balances may require individual MMF limits to increase.
27. To allow the practical management of the treasury transactions each day, it is proposed that the choice over the investments made is delegated to the Director of Finance and Resources.

Investment duration

28. The investment arrangements set-out in this report are of short duration; with the exception of cash plus or short bond funds, investments in an MMF or with the Pension Fund's banker are liquid and available at one days notice. Other regulation investments may be invested for up to 12 months but more typically will be for periods of less than six months.
29. The Pension Fund's Approved Lending List is shown at **Appendix 2**. The maximum recommended investment duration for 2017/18 works within the definition of a specified investment which is to not invest for more than a year.

Risk

30. Cash is only a small part of the overall investments of the Pension Fund and the wider aspects of risk are taken into account in the strategic asset allocation where cash forms part of a diversified portfolio.
31. Looking at cash in isolation, treasury management usually recognises that the two prime risk areas are security and liquidity. It is considered that focussing primarily on these two risks is appropriate for the Pension Fund's relatively low 1% allocation to cash, for day to day cash management purposes; although the AIS has the flexibility to consider yield in the use of higher risk funds.
32. Should the Pensions Panel decide at some point in the future to make a higher strategic allocation to cash, where seeking a higher return would become more important, the balance of risk and reward would need to be revisited.

Review of Strategy

33. The main circumstances where a revised strategy would be prepared include a change in:
- the Fund's strategic asset allocation;
 - the economic environment;
 - the financial risk environment; and
 - the regulatory environment.
34. Whilst the Pensions Panel will be responsible for approving any revised strategy, it may be necessary for action to be taken quickly. It is proposed, therefore, that the responsibility for assessing the circumstances above will rest with the Director of Finance and Resources.
